Competence and individuality more than 25 years of bus awning experience

Dear camping friends!

The Tent Technology brand was founded at the time to meet the high demands of camping bus and caravan awnings

While many inexpensive suppliers also use simple materials, most Reimo Tent Technology awnings are made of high-quality Rib-stop polyester and are mostly manufactured in factories that are also known for their high quality production. Here too, Reimo's own development department, supported by real campers and product testers, ensures special solutions with great ideas!

Reimo has particular expertise in bus tents and rear tents for camping buses. Some models have already been in production for 15 years and are constantly being improved.

This means for you: German design, high quality demands according to German standards and favourable as well as fair prices due to direct purchase ex works. The many years of further development of bus awnings, motorhome awnings and caravan awnings gives you the security of receiving a mature product from the house of Reimo.

Also the latest development of tents - the air tents are produced and offered under the brand Tent Technology.

They offer a quick and easy erection and above all weight saving. And the air tubes as well as the sheathing are very durable and can withstand hard use without any problems.

High quality at fair prices

INTRODUCTION

MATERIAL

Most Reimo Tent Technology awnings are made of high-quality Ribstop polyester and are mostly manufactured in factories that are also known for their high quality production

An additional coating provides the necessary UV protection, as well as all tents are flame retardant.

The waterproofness is at a water column of 2,000 to 3,000 mm.

SCOPE OF DELIVERY

All Tent Technology tents are supplied with pegs, guy ropes and poles/air tubes. Conveniently packed in a carry bag. All air tents come with a double air pump.

Additional delivery such as tent floor or clamping rod is mentioned separately with the respective article

SPECIAL FEATURES

Inflatable tents are becoming more and more important for awnings. An inflatable tent is erected and ready for use in no time. The cumbersome handling with the tent poles is eliminated. Simply inflate with an air pump 7 psi pressure and the tent stands stable and reliable

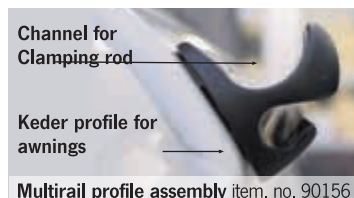

Then attach the awning to the roof rail or piping, stretch a few storm lines and anchor it storm-proof with the guy ropes and pegs

The waterproof and tearproof materials are also convincing. Both hoses and sheathing withstand even hard use without any problems.

FASTENING ON THE VEHICLE

Vehicles with Multirail or rain gutter The ideal attachment is by means of Multirail. You can decide here whether to fix the awning with a clamping pole/lock pole or with keder profile. The lock pole is pushed into the tunnel of the awning and then fixed to the Multirail or another suitable rain gutter with clamping clips. Keder profiles from 5.8 mm to 8 mm in diameter can be inserted into the Multirail.

The most practical solution is to attach the awning to the vehicle using a **double keder bar**. The keder bar as well as the keder profile allow the awning to remain standing when the vehicle is moved away

Double keder rail Item no. 90120

Retrofitting rain gutters

For attaching bus awnings and sun canopies to vehicles without rain gutters, the Universal Kombi rain gutter provides protection against rainwater run-off and accommodates the piping of the awning or sun canopy in the piping profile.

Universal combination gutter
2.90 m Item no. 90113
3.25 m Item no. 90114

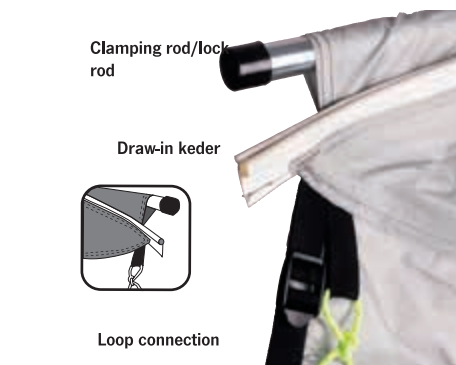

Vehicles without rain gutter

Fastening of awnings by clamping pole/rail bar. In order to attach a clamping pole to the vehicle even without a rain gutter, folding suction cups are available. With 2 folding suction cups you can fix a clamping pole on the roof by clamping the pole into the folding suction cup. For the folding suction cup you need a clean, even and dry roof surface, the attachment is done without drilling.

Folding suction cup item no. 93646

Fastening with loops or guy ropes

The folding suction cup is recommended for fastening awnings, canopies and awnings with sewn-on loops or guy lines without screws. For the folding suction cup you need a clean, even and dry roof surface. A very strong vacuum is created by flipping the lever.

Folding suction cup art. no. 936471

Fastening awnings with a magnetic adapter

The magnetic adapter offers an even faster way of attaching to the vehicle roof. It adheres to flat vehicle roofs and is connected to the awning with piping and connector profiles. Attention: A magnetic adapter does not hold on GRP high or sleeping roofs!

Magnet adapter

Item no. 904490

Camping Tent Know How

The tent skin: Synthetic fibre or cotton?

For travel tents today, modern synthetic fibre fabrics have become almost exclusively accepted because of their excellent waterproofness and stability with low weight and pack size. Their disadvantage is the lower breathability (exception: acrylic fabrics) and the poorer light fastness, but this is of little importance for the usual use as a holiday tent. To increase the light fastness, the fabrics can be provided with a UV-protective coating

Nylon-Taffeta (Polyamide) Extremely light and stable fabric. (Taffeta = English name for taffeta = fabric made of chemical threads). The quality is indicated in threads per square inch (190T=190 threads per square inch). 190T/70D additionally indicates the fibre thickness of 70D. (D = Denier, measure of the thread strength in man-made fibres). Nylon is very light (often only 78 g/m²). It is made even more waterproof by special coating

Nylon PU-coated (polyurethane coating). Polyurethane coats the fibre and prevents water from penetrating the fabric. Polyamide with aluminium coating improves the reflection of sun rays. Depending on the coating, the water column ranges from 400 to 10,000 mm. Disadvantage: Nylon material contracts strongly in the sun. The durability against ultraviolet radiation (sun) is not very good. In rain or cold, the material stretches

Nylon Ripstop Nylon fabric with woven-in reinforcements. More stable, much more tear resistant and more expensive. The stretching of the material during temperature changes is considerably less. It is water-thin and very stable.

Polyester UV resistant Extremely stable and hardly any wear. Long durability. Comparatively resistant to solar radiation. Low water absorption, moisture remains on the surface of the material and hardly penetrates the fibre. Very quick drying.

Polyester PU coated Even more water repellent and extremely quick drying.

Polyester with silicone coating Water beads up even more and does not penetrate the fabric at all

Polyester Ripstop Polyester fabric with reinforced "grid inserts", particularly tear-resistant

Oxford polyester, e.g. 150D. Woven polyester fibres stronger and tear resistant. Used for extremely high quality tents. Reimo tents are mainly made of ripstop polyester or oxford polyester. For long durability at low weight

PE or polyethylene For tent floors or lazy strips. Long, thin "plastic veins" are woven and laminated on both sides with liquid polyethylene. Abrasion and mildew resistant, UV insensitive.

PVC fabric Extremely heavy, waterproof and durable fabric, sometimes used for tent roofs or lazy strips

Cotton Breathable, allows water and air to pass through. Moisture is absorbed, the individual fibres swell and the fabric becomes dense. Cotton usually only achieves an impermeability of about 300 mm water column. Because of its high weight, sensitivity and long drying time, it is now rarely used.

Polycotton Breathable blended fabric of polyester and cotton. Lighter and more water repellent than pure cotton. But considerably heavier and not as waterproof compared to polyester.

Acrylic Modern hi-tech synthetic fibre fabric with breathability similar to cotton tents. Only used in very high quality tents (e.g. series in Isabella tents).

Seam taping Synthetic fibre fabrics initially leak at the seams. To seal them, special high-quality PU sealing tape is pressed onto the inside of the seams of polyester tents under heat and pressure. This makes them completely water-repellent. If damaged, liquid seam sealant can be used to seal the seams. Seam sealing is not as critical for nylon tents (usually double-roof tents). They are sewn with polyester threads with a cotton coating that swells and seals. With cotton tents, the seam itself usually swells.

Flame retardant Tent fabrics are naturally sensitive to fire. To improve their properties, they can be given a flame-retardant coating.

Condensation water tightness Modern fabrics are usually extremely waterproof. As a result, moisture from the breathing air or room air condenses on the

inner walls. The only remedy is good ventilation. The following rule applies: the greater the temperature difference between the outside and inside, the more ventilation is required. The effect can also be reduced by using a thermal canopy made of cotton fabric, which can store moisture and thus has a balancing effect.

The tent poles:

Steel poles Very stable. In the simple version only painted, better rust protection is provided by galvanising. Important is a very good stiffening of the corner angle tent parts by rubber, cords or chains. Colour markings or numbering facilitate assembly.

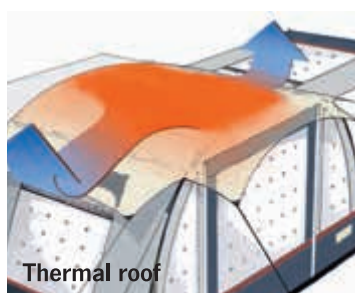

Aluminium poles About 50% lighter than steel. For sufficient stability, they usually have to be dimensioned more strongly than steel poles. Stowage volume is about the same.

Fibreglass poles Used for modern dome or tunnel tents. Manufactured from fibres which are glued together with resin. Highly flexible, elastic and always returns to its original position. Poles of any length can be assembled from individual elements

Elastic rope connections facilitate assembly. Extremely durable, heavier than aluminium.

Aluminium poles for high tech tents Used for special high mountain tents. Mostly made of aircraft aluminium, high-strength and very light. Because of the high material costs, it is only worth using where particularly low weight or very high strength is required

Air tubes No more awkward handling of poles. The tent is erected quickly and easily by inflating the air tubes integrated in the tent skin.

Thermal roof

High vent

Aluminium linkage

Carbon rods

Tent components:

Guy lines Should be a light color so they are visible in the dark. Lines with reflective stripes woven into them are ideal, as they reflect light in the dark like cat's eyes.

Zipper covers Hardly any zippers are waterproof. They should therefore be covered with a fabric flap which can be fixed with Velcro.

Tent windows Windows with mosquito netting provide good ventilation, but must be closed when it rains if the cover cannot be stretched over them for protection. Curtains over the windows protect the rolled-up cover from dirt and water. Curtains in front of the large clear windows protect their privacy. Choose between tents with tinted or clear windows.

Most tents are supplied with additional poles. These allow you to set up front or side doors as awnings.

Inflatable tents - the new generation of modern camping

The advantages of an inflatable tent - pitching a tent has never been easier!

The tent can be set up or taken down with one person, although it is a spacious family tent or a tunnel tent. The inflatable awning is inflated and ready for use in no time; no fiddling with poles strictly according to regulations, no buckling of tent poles in storms. Simply take the air pump, or special electric pump, inflate 7 psi pressure and the tent stands stable and reliable for the coming days.

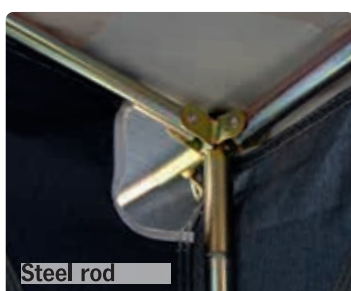

Attach the freestanding awning to the roof rail or piping. Tighten a few more storm lines and anchor the tent securely with the guy ropes and pegs. The compact dimensions are also practical, because without poles the camping luggage automatically becomes easier to handle.

Last but not least, the waterproof, tear-resistant materials make our tents a robust, reliable holiday companion. Should the unusual case of a leak occur in the pole air chambers, these are both easy to patch and replace.

Both hoses and the sheathing provided can withstand hard use with ease.

Double rotting strip

Large awning with 300 cm depth - Ancona

Curtains included

- With extra piping rails on the gable for attaching awnings
- Double lazy strips
- Concealed zips
- Storm straps optional
- A choice of steel or glass fibre poles

A beautiful awning in harmonious colours and top design.

Thanks to its depth of 300 cm, it offers plenty of space without causing a lot of extra work during pitching. The front wall halves are exchangeable, foldable and removable, as are the side walls. The sun roof attachment on the gable offers plenty of shade. A double lazy strip prevents the penetration of moisture. The Vario corners on the right and left in the side walls press the awning firmly against the caravan.

Material: 100% polyester Tencate, extra strong quality 240 g/m².

Scope of delivery: awning skin, curtains, wheel housing and wind screen, packing bags and guy

Caravan canopy - for caravans up to 230 cm Width

- Reliable weather protection
- Caravan cover winterproof and breathable
- Partial cover for better ventilation: reduction of mould risk
- Made of high-strength 3-layer SFS fabric 160 g/m²
- Waterproof and UV-resistant

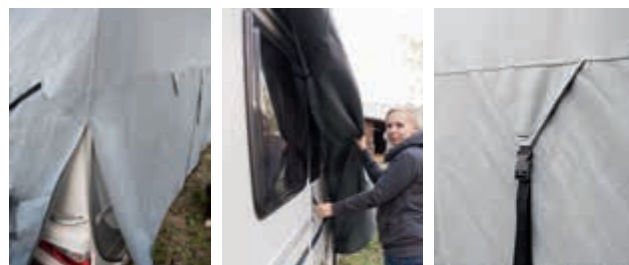

Caravans are exposed to the weather - especially when the vehicles are parked outside. Precipitation and intense sunlight, but also dust, dirt, bird droppings or tree resins leave their mark over time and not only impair the appearance of the vehicles, but also their service life

A caravan cover is inexpensive to purchase and offers reliable protection. The paintwork of your vehicle remains well maintained and does not weather - and your upholstery fabrics in the interior are also protected from fading by the caravan cover. Colour: Grey

Caravan protective cover - for caravans up to 230 or 250 cm width

- Reliable weather protection
- Protective cover is winterproof and breathable at the same time
- Zips at all corners for access from both sides
- Good ventilation, reduction of mould risk
- Made of high-strength 3-layer SFS fabric: 160 g/m²
- Waterproof and UV resistant

With this breathable protective cover, you can protect your caravan from UV radiation, mould, water, dirt, dust and other weather influences. The roll-up side wall allows access at any time.

Motorhome awning connection Multirail

① Multirail, ② Front spoiler, ③ Rearspoiler

Water drainage via spoiler profile

Awning fastening with clamping rod

Awning fastening with pull-in piping

Multirail - rain gutter, sun sail and roof rack attachment in one

- For VW T4, T5 and T6 short and long wheelbase, Renault Traffic & Mercedes Vito, as well as for recreational vehicles and motorhomes
- Rain gutter for sun sail and roof rack
- Easy attachment of awning with clamping rod or pull-in keder
- Easy mounting of the self-adhesive spoiler profiles
- The aluminium rail is already pre-drilled
- Absorption of roof loads up to 100 kg

In combination with a conventional roof rack, you can use it to transport bulky goods such as kayaks, bicycles or surfboards. The Multirail can also be mounted on vehicles with sleeping or pop-up roofs. Here the maximum roof load is 50 kg, approved by VW. The Multirail protects you from rainwater running off when the side windows and doors are open by means of the spoiler profile (please order separately). The Multirail is attached to the vehicle with a special adhesive. The matching spoiler set with screws and mounting instructions must be ordered separately.

Multirail for Citroën Spacetourer/Jumpy, Peugeot Traveler/Expert, Toyota Proace, all from 3/2016; Opel Vivaro C/ Zafira Life from autumn 2019 and Pössl Campster/Campy, vehicle length 4950 mm

Mosquito Free - Mosquito net tent for the awning

- Enjoy the evening mosquito-free
- Lightweight
- Small pack size
- Suitable for many awnings

The mosquito net tent is simply attached to the awning arms with hooks and protects you from annoying mosquitoes, midges, flies, wasps and other insects.

Suitable for many awnings, as the hooks are attached to adjustable straps and the mosquito net tent can thus be adjusted. The tent is attached to the ground with pegs.

The mosquito net tent has 2 side entrances and one entrance to the side of the vehicle (zipper). Dimensions: width 240 cm, depth 230 cm, height front approx. 180 cm - rear (vehicle) 240 cm, weight approx. 2.3 kg.

Included in delivery: Pegs, incl. packing bag.

Sun sail for VW bus, camping bus

Palm Beach 2 - Sun sail and side wall for camping buses

- Robust sun sail with 240 cm depth
- Side walls optionally in two different widths
- Connection with 5 + 8 mm keder profile
- Including diagonal poles against "water bag" in the dome roof

① Palm Beach 2 2.6 - Width 260 cm Ideal for Volkswagen Transporter KR from 1996 onwards

Chic and robust sun awning for your caravan with sewn-on keder profile suitable for VW Transporter with Multirail or similar keder rail. The two supplied upright poles as well as two diagonally running glass fibre poles, ensure a stable arching of the sun canopy upwards - against the formation of a water bag in the dome roof. **Scope of delivery:** sun canopy, 2 erection poles, 2 diagonal poles, pegs and guy ropes

900151 129,-

② Palm Beach 2 3.0 - Width 300 cm Ideal for VW T4/T5/T6 LR

The length of 3 metres is ideal for VW Transporter LR or T3. With sewn-on keder profile suitable for vehicles with Multirail or similar keder rail. For vehicles with rain gutter, we recommend our double keder rail art. no. 90120 as an adapter to the keder profile.

Scope of delivery: sun canopy, 3 upright poles, 2 diagonal poles, ground nails and guy ropes

900152 139,-

Matching side walls for Palm Beach 2 2.6 and 2 3.0.

The mesh window provides privacy with maximum air permeability and can be closed with a cover if required. The top edge of the side wall is attached to the sun canopy with Velcro and braced to the ground. Can be mounted on the left or right. **Scope of delivery:** side wall, ground pegs, guy ropes

③ The width of 2.25 m allows the sliding bus door to open unhindered. **Weight:** approx. 2.2 kg. **Dimensions:** W 225 x H 180 cm

900153 89,99

④ The height of 200 cm allows the side wall to be extended further. **Weight:** approx. 2,5 kg. **Dimensions:** W 240 x H 200 cm

- With tent floor
- 3 doors, 1 door on each side

With the Tour Lite Space 2, the van driver gets a universal, light and spacious awning with generous windows

Thanks to doors on 3 sides, sewn-in floor and forced ventilation, the tent can be used in a wide variety of situations without any problems. The free poles make it easy and quick to pitch and the sunshade on the windows guarantees sufficient shade in the tent even in strong sunshine

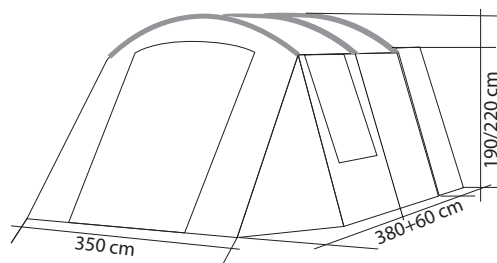

With the optional sleeping tent, the van can be extended by 2 to 4 sleeping places.

Scope of delivery: tent skin, poles, lock pole, pitching poles, tent pegs, guy ropes, pack sack.

Water protection tarpaulin

- Material: 100% PVC
- Dry awning in heavy rain

This practical groundsheet prevents water from entering the tent. 4 separately inflatable air hoses at the edges let the water simply flow past and the inside of the tent remains dry.

Water protection tarpaulin, colour grey
